

## Frequently Asked Questions

**Q: What is the release date of SoftTrac® Capture Suite 2.5?**

A: July 1, 2011.

**Q: What enhancements have been made to SoftTrac Scan in SoftTrac Capture Suite 2.5?**

A: The newest version of SoftTrac Scan includes a wide range of enhancements designed to improve the efficiency and effectiveness of document scanning operations. These enhancements include: dynamic feeding that automatically adjusts the feeder speed at run time; an image configuration tool that streamlines the configuration of image settings; dog-ear detection; and 'About Boxes' with complete version information for imaging components, camera firmware, transport managers, and more. What's more, SoftTrac Capture Suite 2.5 provides a legacy output option that allows for the use of existing back-end processes. And, legacy SoftTrac and version 2.5 can be installed on the same host PC.

**Q: What is SoftTrac PostScan?**

A: Part of the SoftTrac family of software solutions, SoftTrac PostScan (formerly ExportTrac) is a standalone product that streamlines the integration between scanning platforms such as ibml's and downstream solutions. With the release of SoftTrac Capture Suite 2.5, SoftTrac PostScan now includes built-in connectors between the ibml platform and the Kofax Capture system and TiS eFlow platforms, an API connector that streamlines the integration between the ibml platform and other third-party systems and an image output filter that determines whether output includes color or bi-tonal images.

**Q: What's this I hear about a standalone quality control solution?**

A: SoftTrac Capture Suite 2.5 includes the introduction of SoftTrac Quality Control as a standalone product. SoftTrac Quality Control streamlines quality assurance by allowing users to review documents and images within batches using an adjustable-speed auto-scroll feature. Users can flag documents for re-scanning or edit or delete documents and metadata. SoftTrac Quality Control also allows users to quickly search for specific documents by document ID or document type and search within batches using IJP, barcode or MICR information. What's more, the software has the ability to display thumbnail images of selected documents as well as the results of search criteria.

**Q: Does SoftTrac Capture Suite 2.5 include any enhancements to SoftTrac Analytics?**

A: Yes. SoftTrac Capture Suite 2.5 includes powerful Management Tools, including SoftTrac Analytics. With SoftTrac Capture Suite 2.5, SoftTrac Analytics has been upgraded to include support for multiple databases, meaning information can be combined into a single report as if it were from a single database. The newest version of SoftTrac Analytics also reports on archived data as well as current data, filters information by time and date (in addition to criteria available in the legacy version of the software), includes a built-in errors-to-documents ratio report that allows users to rank scanner performance across sites and features an error ratio summary report detailing error trends for individual scanners.
