

**SoftTrac Quality Control can display thumbnail images of individually selected documents as well as those that meet search criteria.**

**SoftTrac Quality Control** -- the newest addition to ibml's SoftTrac® family of software solutions -- makes it a snap to ensure optimum quality in document scanning environments.

A standalone software solution, SoftTrac Quality Control allows users to quickly review images of documents and batches using an adjustable-speed auto-scroll tool. With SoftTrac Quality Control, users can flag documents for rescanning, rotate and flip images, or edit or delete documents and metadata.

What's more, users can search for specific documents by document ID or document type and search batches using key document data, such as IJP, barcode or MICR information. Users can also change which batches are displayed for review by using filtering options such as:

- Date batches were created
- Date batches were processed
- Batch job
- Scanner on which batches were created
- Scanner operator
- Batch status
- Data connection batches were scanned into

SoftTrac Quality Control can display thumbnail images of individually selected documents as well as those that meet search criteria.

#### **Business Benefits**

- Increase ROI associated with ibml document scanning solutions
- Improve quality assurance processes
- Reduce downstream exceptions
- Seamless integration with SoftTrac products

#### **Product Features**
