ibml

AutoIndexAi Module

Effortless Indexing - Fueled by GenAI

Speed the extraction from all document types with ease

Turn your existing ibml Capture Suite platform into a 24/7 AI-driven extraction engine. With ibml's AutoIndexAI module, simply type what you need—"invoice date," "customer name," or any field—and watch our on-prem GenAI module extract and index every document type, no extra setup required.

Why Legacy Indexing Can't Keep Up

Manual keying and rigid legacy systems introduce costly delays, errors, and setup time.

Here's why it's time to switch:

Bottlenecked Throughput

Tedious manual entry and template adjustments slow every batch

Inconsistent Quality

Human fatigue and limited error-checking leads to unreliable data

Scaling Headaches

Adding headcount or setting up legacy systems for new document types creates new bottlenecks
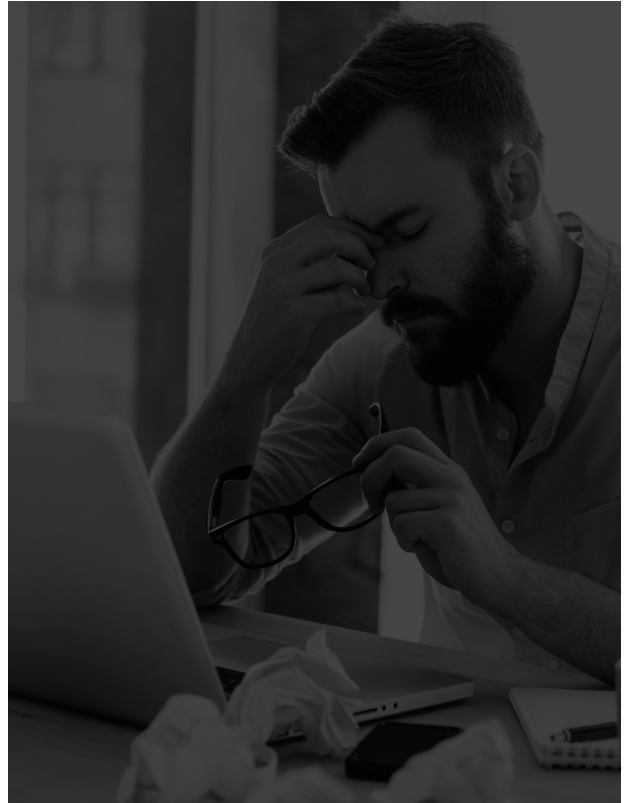

Rigid Workflows

Legacy tools struggle with unstructured, handwritten, or multilingual forms

Hidden Costs

Labor, maintenance, and specialized IT support drain budgets and stifle innovation

Elevate Your Capture with ibml AutoIndexAI

Get AI-driven Speed

AI based systems can automatically operate continuously without fatigue or manual intervention

Enjoy Prompt-based Setup

No coding, no scripts: just enter simple natural-language prompts and let the module handle any document format, structured or unstructured, machine print or cursive handwriting

Improve productivity while saving costs

Reduced manual intervention, higher accuracy, AI-driven speed and minimized setup time all result in reduced cost of operations, improved productivity and better business outcomes, allowing you to use your valuable human intelligence for things that matter most to your business
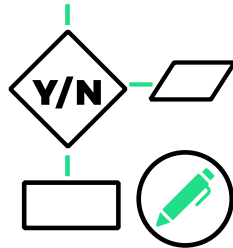

AI Intelligence You Can Trust

Other AI solutions store your data in the public cloud or share your uploads to publicly shared databases. **But not ibml**.

ibml offers total control over your data by keeping everything on-premise and AI on a tight leash:

On-prem Privacy

Runs entirely within your firewall or private cloud—your data never leaves your control

Confidence Scoring

Proprietary algorithms detect and flag low-confidence results to prevent AI "hallucinations"

Human-in-the-Loop

Easily review and correct extracted data that does not meet your confidence threshold

Data Privacy

Retain full ownership of your documents, extracted metadata, and AI training models

Scale Easily with Subscription-based Flexibility

Getting started with ibml AutoIndexAI is effortless, no large upfront license required. Scale as you need. Simply add the module to your existing ibml Capture Suite as an annual subscription and pay only for those pages you process through the AI module. With new AI enhancements automatically dropping into your module, you stay future-proofed without reinvestment.

Validation from Anywhere

Now, with the new Thin Client Validation Module, your employees can validate the exceptions that need human intervention or don't meet the confidence level you set. From anywhere in the world, workers can securely access ibml Capture Suite using a browser-based, Thin Client Validation Module.

Turn to your Trusted Partner

Enabling your enterprise with modern GenAI technology just got easier with ibml. As your trusted partner for many decades, we can help you deliver high volume document-and-data capture without the need of any additional contracting—unlike a new and unknown vendor.
