Accelerated Mortgage Capture

Faster implementation and payback for mortgage capture applications

Accelerated Mortgage Capture automatically recognizes hundreds of different mortgage form and document types and knows which fields to extract.

ibml's Accelerated Mortgage Capture software speeds the implementation and payback of automated loan processing systems by use of a large library of mortgage-related documents with pre-configured rules. Accelerated Mortgage Capture automatically recognizes hundreds of different mortgage form and document types and knows which fields to extract. New forms are being added all the time.

Streamlining mortgage document classification and data extraction delivers benefits to:

- Financial institutions that fund loans
- Financial institutions that purchase loans
- Loan servicing companies
- Compliance auditing organizations
- Business process outsourcing organizations

ibml's Accelerated Mortgage Capture provides users with the data they need from mortgage files, when they need it.

Accelerated Mortgage Capture exports classified documents and captured data into any downstream system for processing, including any loan origination system, mortgage workflow or enterprise content management platform or pre- or post-funding mortgage auditing solution. Users benefit from faster, more cost-effective implementation of their capture systems for a faster return on investment. Classifying documents and capturing data from mortgage files more quickly in the mortgage loan origination process also provides knowledge workers with ready access to the critical data they need.

Each implementation of Accelerated Mortgage Capture comes with an extensive library of documents and business rules. New documents are imported from any scanner or electronic file. The documents become part of the Accelerated Mortgage Capture library after an intuitive review and validation process performed by the user or ibml experts.

With other software products, training systems to locate and extract required information from mortgage files can be a time-consuming, labor-intensive and costly process that delays implementation and return on investment. Accelerated Mortgage Capture drastically reduces the typical training process for new forms and document types, needing as few as 2 or 3 examples.

While Accelerated Mortgage Capture's extensive document library meets the most complex loan origination requirements, ibml offers professional services to customize the application based on additional business needs.

Accelerated Mortgage Capture can be delivered as an on-premise or cloud-based solution.

See for yourself how ibml can help you reduce the time, cost and risk of processing mortgage loan applications, while freeing staff to focus on customer service and other value-added, profit-generating activities.

ibml welcomes the opportunity to run your typical loan file through our Accelerated Mortgage Capture solution and show you its unique benefits. To schedule a demonstration, contact lcotten@ibml.com.
