

ibm Coretex[®]

Effortless Indexing— Fueled by AutoIndex AI

**Speed extraction from all
document types with ease**

Transform your existing ibm Coretex platform into a 24/7 AI-driven extraction engine. Simply type what you need—“invoice date,” “customer name,” or any field—and watch our on-prem AI-powered module extract and index every document type, no extra setup required.

Why Legacy Indexing Can't Keep Up

Manual keying and rigid legacy systems introduce costly delays, errors, and setup time.

Here's why it's time to switch:

Bottlenecked Throughput

Tedious manual entry and template adjustments slow every batch

Inconsistent Quality

Human fatigue and limited error-checking leads to unreliable data

Scaling Headaches

Each new document type demands more setup time or additional staff

Rigid Workflows

Legacy tools struggle with unstructured, handwritten, or multilingual forms

Hidden Costs

Labor, maintenance, and specialized IT support drain budgets and stifle innovation

Elevate Your Capture with AI-Powered Indexing

Transform every document into trusted data with the AutoIndex AI module for ibm Coretex

Get AI-Driven Speed

Process documents continuously, without fatigue or manual oversight

Enjoy Prompt-Based Setup

Just tell ibm Coretex what you need using natural language and let the Index module handle any document format—handwritten or printed, structured or unstructured

Improve Productivity While Saving Costs

Eliminate repetitive tasks and lower costs so your teams can turn their attention to higher-value work

AI You Can Trust

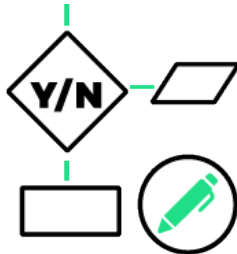

Other AI solutions store your data in the public cloud or share your uploads to publicly shared databases. **But not ibml.**

ibml Coretex offers total control over your data by keeping everything on-premises and your AI on a tight leash:

On-Prem Privacy

Runs entirely within your firewall or private cloud, so your data never leaves your control

Confidence Scoring

Proprietary algorithms detect and flag low-confidence results to prevent AI “hallucinations”

Human-in-the-Loop

Easily review and correct extracted data that does not meet your confidence threshold

Data Privacy

Retain full ownership of your documents, extracted metadata, and AI training models

Scale Easily with Subscription-Based Flexibility

Getting started with **ibml Coretex + AutoIndex AI** is effortless. With no large upfront license required, you can always scale as needed.

- **Pay only for what you need.** Scale volumes up or down anytime without disruption.
- **Stay current, always.** Access the latest AI advancements automatically, keeping your solution future-ready.
- **Adapt effortlessly.** Add new capabilities as your business evolves—no reinvestment required.

Validation from Anywhere

Empower your teams to handle exceptions from anywhere with browser-based validation. With secure access to review and correct data from any location—no VPN or local installation required, **ibml Coretex** helps you maintain high accuracy while retaining complete control over every action.

Turn to Your Trusted Partner

Enabling your enterprise with modern AI technology just got easier with **ibml**. We've powered the world's most data-intensive organizations for decades and now **ibml Coretex** is making next-generation AI-driven capture simple, secure, and scalable.
